

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application. An identifier indicating the status of each claim is provided.

Listing of Claims

1-12. (Canceled)

13. (Previously Presented) A computer readable medium adapted to store a computer program for an information processing apparatus recording AV stream data on a recording medium the computer program comprising:

a first determining step of determining whether a first table is recorded on the recording medium, the first table recorded as a function of a first recording method;

a second determining step of determining whether a second table is recorded on the recording medium, the second table recorded as a function of a second recording method;

a reproducing step of reproducing only one of either the first table or the second table;

wherein the first table describes a relation of correspondence between a presentation time stamp and an address in said AV stream data of a corresponding access unit, and

wherein the second table describes a relation of correspondence between an arrival time stamp derived from an arrival time point of a transport packet and an address in said

AV stream data of a corresponding transport packet, from said recording medium based on the first determining step or the second determining step,

wherein the first table is distinct from the second table; and

a controlling step of controlling output of said AV stream data based on the reproduced table.

14. (Cancelled)

15-27. (Canceled)

28. (Previously Presented) An information processing apparatus for recording AV stream data on a recording medium, comprising:

a controller for generating only one table, the one table being either a first table or a second table;

wherein the first table describes a relation of correspondence between a presentation time stamp and an address in said AV stream data of a corresponding access unit,

wherein the second table describes a relation of correspondence between an arrival time stamp derived from an arrival time point of a transport packet and an address in said AV stream data of a corresponding transport packet,

wherein the first table is distinct from the second table; and

a recorder for recording one of the generated first table or the generated second table, on said recording medium with said AV stream data, based on the controller.

29. (Previously Presented) The information processing apparatus according to claim 28

wherein said first table is EP_map; and

wherein said second table is TU_map.

30. (Previously Presented) The information processing apparatus according to claim 28 wherein

said controller selects said second table in case of non-cognizant recording.

31. (Previously Presented) The information processing apparatus according to claim 28 wherein

said controller selects said first table in case of self encoding recording.

32.(Previously Presented) The information processing apparatus according to claim 28 wherein

said controller selects said first table in case of cognizant recording.

33. (Previously Presented) The information processing apparatus according to claim 28 wherein said controller generates the identification information indicating which of said first and second tables have been recorded; and

said recorder memorizing said identification information.

34. (Previously Presented) The information processing apparatus according to claim 33 wherein said controller manages control so that,

if said first table is recorded along with said AV stream data,

said reproduction specifying information expresses the time information of the reproduction domain of said AV stream data on the presentation time basis, and so that,

if said second table is recorded along with said AV stream data,

said reproduction specifying information expresses the time information of the reproduction domain of said AV stream data on the arrival time basis.

35. (Canceled)

36. (Previously Presented) A computer readable medium adapted to store a computer program for an information processing apparatus recording AV stream data on a recording medium the program, comprising:

a step of generating only one table, either a first table or a second table;

wherein the first table describes a relation of correspondence between a presentation time stamp and an address in said AV stream data of a corresponding access unit;

wherein the second table describes a relation of correspondence between an arrival time stamp derived from an arrival time point of a transport packet and an address in said AV stream data of a corresponding transport packet,

wherein the first table is distinct from the second table; and

a recording step of recording one of a generated first table or a generated second table, on said recording medium with said AV stream data, based on the generating step.

37. (Previously Presented) A computer readable medium adapted to store a computer program for controlling an information processing apparatus recording AV stream data on a recording medium the program, comprising:

a step of generating only one table, either a first table or a second table;
wherein the first table describes a relation of correspondence between a presentation time stamp and an address in said AV stream data of a corresponding access unit,
wherein the second table describes a relation of correspondence between an arrival time stamp derived from an arrival time point of a transport packet and an address in said AV stream data of a corresponding transport packet,
wherein the first table is distinct from the second table; and
a recording step of recording the generated first table or the generated second table, on said recording medium with said AV stream data,
wherein the generated first table or the generated second table is a function of a recording method.

38.(Previously Presented) An information processing apparatus for reproducing AV stream data from a recording medium, comprising:

a determining unit configured to determine whether a first table is recorded on the recording medium, the first table recorded as a function of a first recording method, or whether a second table is recorded on the recording medium, the second table recorded as a function of a second recording method;

a reproducing unit for reproducing only one table, either a first table or a second table;

wherein the first table describes a relation of correspondence between a presentation time stamp and an address in said AV stream data of a corresponding access unit,

wherein the second table describes a relation of correspondence between an arrival time stamp derived from an arrival time point of a transport packet and an address in said AV stream data of a corresponding transport packet, from said recording medium,

wherein the first table is distinct from the second table; and

a control unit for controlling output of said AV stream data based on the reproduced table.

39. (Previously Presented) An information processing apparatus for processing audio and/or picture information, comprising:

an input unit operable to input audio and/or picture information;

a controller operable for generating characteristic point information comprising:

(i) an entry point map describing a relationship between a presentation time stamp of an entry point and an address of a respective entry point, or

(ii) a time unit map describing a relationship between an arrival time stamp of a time unit and an address of a respective time unit,

wherein the characteristic point information comprising only one map, one of either the entry point map or the time unit map is generated as a function of a type of said input audio and/or picture information,

wherein the entry point map is distinct from the time unit map; and

an output unit operable to output the generated characteristic point information.

40. (Previously Presented) The apparatus of claim 39, further including a recorder operable to record said audio and/or picture information and the characteristic point information on a recording medium.

41. (Previously Presented) The apparatus of claim 40 wherein said controller generates the entry point map when the input audio and/or picture information is converted to self-encode stream format.

42. (Previously Presented) An information processing apparatus for processing audio and/or picture information, comprising:

an input unit operable to input audio and/or picture information;

a controller adapted to generate only one map,

wherein the only one generated map is either

(i) an entry point map describing a relationship between a presentation time stamp of an entry point and an address of a respective entry point, or

(ii) a time unit map describing a relationship between an arrival time stamp of a time unit and an address of a respective time unit,

wherein the controller is adapted to generate only one map, one of either the entry point map or the time unit map as a function of a recording method,

wherein the entry point map is distinct from the time unit map; and

a recorder operable to record the audio and/or picture information and the generated map on a recording medium.

43.(Previously Presented) The apparatus of claim 42, wherein said controller generates the time unit map when the entry point map cannot be prepared.

44. (Previously Presented) An information processing apparatus for recording input audio and/or picture information, comprising:

a controller operable to generate playlist information and map information corresponding to clip information,

wherein said clip information includes said audio and/or picture information,

wherein said playlist information includes at least one play item designated by an in-point and an out-point of the clip information,

wherein said map information including only one map; one of either:

(i) an entry point map describing a relationship between a presentation time stamp of an entry point and an address of a respective entry point, or

(ii) a time unit map describing a relationship between an arrival time stamp of a time unit and an address of a respective time unit,

wherein generation of only one map; one of either the entry point map or the time unit map is a function of a recording method,

wherein the entry point map is distinct from the time unit map; and

a recorder operable to store the playlist information, the map information and the clip information on a recording medium.

45. (Previously Presented) The apparatus of claim 44, wherein said controller generates the map information for each point of the clip information.

46. (Previously Presented) The apparatus of claim 45, wherein said controller generates the map information of the same type for all clip information associated with one playlist.

47. – 54. (Canceled)

55. (Previously Presented) An apparatus for reproducing audio and/or picture information comprising:

a reproducing device for reproducing from a storage medium audio and/or picture information and only one map; one of either:

(i) an entry point map describing a relationship between a presentation time stamp of an entry point of said information and an address of a respective entry point, or

(ii) a time unit map describing a relationship between an arrival time stamp of a time unit of said information and an address of a respective time unit,

wherein the only one map; one of either the entry point map or the time unit map is reproduced as a function of a type of said input audio and/or picture information,

wherein the entry point map is distinct from the time unit map;

a map recovery unit for recovering the entry point map or the time unit map from said storage medium; and

an audio and/or picture information reproducing unit for reproducing the audio and/or picture information associated with the recovered map.

56. (Previously Presented) The apparatus of claim 55, wherein the entry point map is stored on said storage medium when the audio and/or picture information is in a self-encode stream format.

57. (Previously Presented) An apparatus for reproducing audio and/or picture information, comprising:

a determining unit configured to determine map information recorded on a recording medium, the map information recorded as a function of a corresponding recording method;

a reproducing device for reproducing from a storage medium that stores playlist information and map information corresponding to a stream file,

said stream file including said audio and/or picture information,

wherein said playlist information including at least one PlayItem having IN time to indicate a presentation start time of PlayItem and OUT time to indicate a presentation end time of PlayItem ,

wherein said map information includes only one map; one of either:

(i) an entry point map describing a relationship between a presentation time stamp of an entry point of the stream file and an address of a respective entry point, or

(ii) a time unit map describing a relationship between an arrival time stamp of a time unit of the stream file and an address of a respective time unit, wherein the entry point map is distinct from the time unit map; a playlist recovery unit for recovering the playlist information; a map recovery unit for recovering the map information; and a reproducing unit for reproducing the stream file associated with the recovered map information.

58. (Previously Presented) The apparatus of claim 57 wherein respective map information is stored for each stream file.

59. (Previously Presented) The apparatus of claim 58 wherein map information of the same type is stored for each stream file associated with one playlist.

60.-64. (Canceled)

65. (Previously Presented) A record medium on which is recorded a computer program operable to control a processor to carry out the steps of claim 47.

66. (Previously Presented) A record medium on which is recorded a computer program operable to control a processor to carry out the steps of claim 50.

67. (Previously Presented) A record medium on which is recorded a computer program operable to control a processor to carry out the steps of claim 52.

68. (Previously Presented) A record medium on which is recorded a computer program operable to control a processor to carry out the steps of claim 60.

69. (Previously Presented) A record medium on which is recorded a computer program operable to control a processor to carry out the steps of claim 62.

70. (Previously Presented) A data providing medium encoded with data readable by a digital processor for controlling reproduction of said data, including:

a flag type; and

an entry point map describing a relationship between a presentation time stamp of an entry point of audio and/or picture information recorded thereon and an address of a respective entry point, or a time unit map describing a relationship between an arrival time stamp of a time unit of said information and an address of a respective time unit in accordance with a type of said input audio and/or picture information,

wherein the entry point map is distinct from the time unit map,

wherein the flag type indicates a type of recording process used to record only one map; one of either the entry point map or the time unit map.

71. (Previously Presented) A data providing medium encoded with data readable by a digital processor for controlling reproduction of said data, including:

playlist information and map information corresponding to a stream file, said stream file including audio and/or picture information, said playlist information including at least one PlayItem having IN time to indicate a presentation start time of PlayItem and OUT time to indicate a presentation end time of PlayItem, and

said map information being only one map; one of either:

(i) an entry point map describing a relationship between a presentation time stamp of an entry point and an address of a respective entry point, or

(ii) a time unit map describing a relationship between an arrival time stamp of a time unit of the stream file and an address of a respective time unit,

wherein inclusion of only one map; one of either the entry point map or the time unit map is a function of a recording method,

wherein the entry point map is distinct from the time unit map.

72. (Previously Presented) The apparatus for reproducing according to claim 57, comprising:

a reproducing device for reproducing the map file from the stream file.

73. (Canceled)

74. (Previously Presented) The data providing medium encoded with data readable by a digital processor for controlling reproduction of said data according to claim 71, comprising:

reproducing the map file from the stream file.

75. (Canceled)

76. (Canceled)
